

[CHARACTER TRANSCODING METHOD FOR MOBILE PHONES]

Abstract of Disclosure

Characters encoded with a first character-encoding rule when inputted into a mobile phone are transformed to characters encoded with a second character-encoding rule. A document giving at least one character is first input into the mobile phone. An encoding rule of at least one character of the document is checked. All characters in the document are transformed to characters encoded in a second character-encoding rule if the checked character of the document is in a first character-encoding rule.
